Technical Skills

Languages	Go	JavaScript	SQL	HTML/CSS
Backend & APIs	FastAPI	Gin (Go)	RESTful APIs	
Databases	PostgreSQL	MongoDB	Redis	
DevOps & Cloud	Docker	Git		
Automation & AI	n8n	LangGraph		
Concepts	Concurrency	Distributed Systems	Caching	Rate Limiting

Projects

QryPilot

Go • Groq AI • n8n

- Built an AI-driven observability tool that translates natural language into PromQL queries.
- Enabled engineers to query infrastructure metrics using plain English, reducing PromQL learning overhead.
- Integrated Groq AI for low-latency query interpretation optimised for real-time monitoring use cases.
- Designed for production observability workflows — alerts, metrics exploration, and dashboards.

Sentinel

Go • Concurrency

- Developed a high-throughput concurrent web scraping system using worker pools in Go.
- Implemented rate limiting and request throttling to avoid detection and anti-bot mechanisms.
- Optimised memory usage to support large-scale crawling with minimal overhead.
- Designed for extensibility to support distributed crawling in future iterations.

URL Shortener

Go • Redis • Docker

- Built a low-latency URL shortening service with focus on performance and simplicity.
- Used Redis as a caching layer to enable fast redirection and high availability.
- Containerised the application with Docker for consistent deployment across environments.

Education

Panjab University, Chandigarh

2023 – 2026 (Expected)

Bachelor of Computer Applications (BCA)

GMSSS Sector 23, Chandigarh

Class XII

Senior Secondary Education

Relevant Coursework

Database Management Systems · Operating Systems · Computer Networks · Software Engineering Principles

Additional Information

- Comfortable working in Linux-based development environments.
- Strong interest in backend engineering, infrastructure tooling, and DevOps/SRE concepts.
- Actively building and refining production-oriented projects beyond academic requirements.
